

## Fund Overview

The fund aims to deliver an annualised net return of 7% to 8% over the medium to long-term in anything but the bleakest of market conditions. It will do so via an actively managed exposure to a diversified portfolio of defined return investments linked to global equity indices. It invests primarily in UK Government Bonds to provide the return of capital to investors over time, alongside a portfolio of global, liquid derivatives that generate the return on capital. Due to the nature of the investments, the fund's behaviour in different market scenarios should be more predictable and the returns more probable.

## Monthly Commentary

May was a good month for equity markets, with the UK large cap market continuing its recent form, rising 2.1%. Headline inflation is now down to 2.3%, whilst core inflation failed to come down to its estimated levels, which temporarily halted the equity market's gain. In the US, despite indications from the FED that interest rates may not be coming down too soon, the US large cap market recovered its April fall by rising 4.8% this month, thanks to strong earnings reports from some big companies. The EU also reversed April's fall with the large cap market there rising 2.1%. The sensitivity ('delta') of the fund to equity markets is still relatively low at 25%, so it makes sense that the fund was up 0.85% for the month. As markets have been generally rising, the fund is seeing consistent maturities of its autocall positions each month. In May there were four maturities, three on their first-year anniversary and one on its third year. The terms for the new autocalls that are replacing these continue to be relatively good. The funds managers continue to focus on achieving as much downside protection whilst obtaining the required annual coupon to meet the fund's return target. As the maturities come and new trades are put on, the delta naturally increases slightly, resulting in the fund participating more in the movement of equity markets.

## Key Facts

<b>Launch Date</b>	4 November 2013
<b>Fund Size</b>	GBP 2.16bn

## Forward Looking Scenario Analysis and Intrinsic Value

The scenarios presented are an estimate of future performance based on current derivative market conditions and are not an exact or reliable indicator. What you get will vary depending on how the market performs and how long you keep the investment.

Although the Fund has a medium to long-term objective to deliver an annualised return of 7%-8% over the long term, the scenario analysis is calculated over shorter term periods for greater accuracy.

	Market Move	-30%	-20%	-10%	0	10%	20%	30%
Scenario Analysis	3 months	-16.81%	-8.39%	-2.11%	1.76%	3.30%	3.69%	3.89%
	1 year	-13.67%	-4.31%	2.91%	6.94%	8.30%	8.73%	8.95%
	2 years	-9.03%	1.99%	10.02%	13.82%	15.05%	15.44%	15.64%
	3 years	-3.62%	9.35%	17.45%	20.88%	21.88%	22.16%	22.33%
Intrinsic Value	Intrinsic NAV Change	28.29%	26.09%	14.58%	5.62%	3.23%	3.23%	3.23%
	Duration	4.66	3.74	2.05	0.84	0.53	0.53	0.53
	Intrinsic Value (Annualised)	5.49%	6.40%	6.85%	6.73%	6.24%	6.24%	6.24%

**The Fund's actual returns may differ from the estimates shown above and are subject to daily price movement. Future performance may also be subject to taxation, that could change in the future. The value of investments can go down as well as up and you may not get back the full amount invested.**

### Estimated Fund Move or 'Intrinsic Value'

The intrinsic value is the aggregate terminal value of the Fund considering estimated fees over the relevant period. The table above shows that, for example, if an investor bought the Fund today and none of the markets on which the investments were based moved between now and when the investments mature, the Fund would increase by 5.62%, a terminal value of GBP 2.1464 (based on current NAV of GBP 2.0321). What this does not tell us is the yield that is represented by these intrinsic values.

### Average Time to Holdings' Maturity or Duration

The table above also shows the weighted average time to maturity of the investments held within the Fund. Currently this is 0.84 years

because, at current market levels, most of the current investments are likely to mature within 1 year. This number gives the investor an idea of how long it will take for them to earn the Equivalent Annualised Return.

### Equivalent Annualised Return or Intrinsic Value (Annualised)

The table also shows the current expected return of the Fund considering estimated fees for certain movements in the underlying indices. For example, if markets do not move, we would expect the Fund to yield 6.73% given its current make-up. You can also see that we would expect a positive return if the market falls 20% and then stays at that level until all investments mature.

## Key Risks

**This is a marketing communication.** The Fund is aimed at advised & discretionary market investors over the long term who have the capacity to tolerate a loss of the entire capital invested or the initial amount.

A final investment decision should not be contemplated until the risks are fully considered. A comprehensive list of risk factors is detailed in the Risk Warnings Section of the Prospectus and the Supplement of the Fund and in the relevant key investor information document (KIID). A copy of the English version of the Supplement, the Prospectus, and any other offering document and the KIID can be viewed at [www.atlantichousegroup.com](http://www.atlantichousegroup.com) and [www.geminicapital.ie](http://www.geminicapital.ie). A summary of investor rights associated with an investment in the Fund is available in English at [www.geminicapital.ie](http://www.geminicapital.ie).

**Calculations do not consider credit spread movements of the issuers of the securities. The Mark to Market of the securities and therefore the NAV of the Fund will decrease as credit spreads widen and vice versa if spreads narrow. The value of investments and income from them can go down and you may get back less than originally invested. There is no guarantee that the Fund will achieve its objective. The level and basis of tax is subject to change and will depend on individual circumstances. The Fund invests in derivatives for investment purposes, for efficient portfolio management and/ or to protect against exchange risks. Derivatives are highly sensitive to changes in the value of the asset from which their value is derived. A small movement in the value of the underlying asset can cause a large movement in the value of the derivative. This can increase the sizes of losses and gains, causing the value of a derivative investment to fluctuate and the Fund could lose more than the amount invested.**

The Fund invests in high quality government and corporate bonds. All bonds will be rated at least A- by Standard and Poors at outset. If any of the bonds the Fund owns suffer credit events the performance of the Fund could be adversely affected. Other risks the Fund is exposed to include but are not limited to, credit and counterparty risk, possible changes in exchange rates, interest rates and inflation, changing expectations of future market volatility, changing expectations of equity market correlation and changing dividend expectations.

A decision may be taken at any time to terminate the arrangements for the marketing of the Fund in any jurisdiction in which it is currently being marketed. Shareholders in affected EEA Member State will be notified of any decision marketing arrangements in advance and will be provided the opportunity to redeem their shareholding in the Company free of any charges or deductions for at least 30 working days from the date of such notification.

## Important Information
